Disaster Studies Jun 27 2019

This book covers several dimensions of disaster studies

as an emerging discipline. It is the inaugural book in the series 'Disaster Studies and Management' and deals with questions such as "Is disaster management a field of practice, a profession, or simply a new area of study?" Exploring intersectionalities, the book also examines areas of research that could help enhance the discourse on disaster management from policy and practice perspectives, revisiting conventional event-centric approaches, which are the basis for most writings on the subject. Several case studies and comparative analyses reflect a critical reading of research and practice concerning disasters and their management. The book offers valuable insights into various subjects including the challenge of establishing inter- and multi-disciplinary teams within the academia involved in disaster studies, and sociological and anthropological readings of post-disaster memoryscapes.

Novel Frontiers in the Production of Compounds for Biomedical Use May 31

2022 The present book entitled "Novel Frontiers in the Production of Compounds for Biomedical Uses" can perhaps be placed in its best perspective by the Shakespearean character in *The Tempest* who exclaimed "What's past is prologue". Indeed, this compilation of some of the outstanding presentations in the field of biomedicine made at the 9 European Congress on Biotechnology (Brussels, Belgium, July 11-15, 1999) not only reflects the achievements of the recent past, but provides a privileged glimpse of the

biotechnology that is emerging in the first decade of the new Millennium. It is becoming increasingly apparent that biotechnology is offering biomedicine novel approaches and solutions to develop a sorely needed new generation of biopharmaceuticals. This is all the more necessary because in recent years, new diseases have emerged with extraordinary lethality in all corners of the globe, while age-related chronic illnesses have filled the gap wherever biomedicine has made successful inroads. The rise of antibiotic resistance also poses major threats to public health. Thus, as disease patterns evolve, the rational development of new drugs is becoming urgent, not only for the clinical outcome of patients, but also in optimising the allocation of scarce health care resources through the use of cost-effective production methods. It is in response to all these challenges that biotechnology offers new strategies that go beyond the more traditional approaches.

By the mid-1990's, the number of recombinant products approved annually for therapeutic use reached double digits. With the advent of the genomics revolution.

Greek Homosexuality Apr 29 2022

Obsessed by a Dream Jul 21 2021 This Open Access biography chronicles the life and achievements of the Norwegian engineer and physicist Rolf Widerøe. Readers who meet him in the pages of this book will wonder why he isn't better known. The first of Widerøe's many pioneering contributions in the field of accelerator physics was the betatron. He later went on to build the first radiation therapy machine, an advance that would eventually revolutionize cancer treatment. Hospitals worldwide installed his machine, and today's modern radiation treatment equipment is based on his inventions. Widerøe's story also includes a fair share of drama, particularly during World War II when both Germans and the Allies vied for his collaboration.

Widerøe held leading positions in multinational industry groups and was one of the consultants for building the world's largest nuclear laboratory, CERN, in Switzerland. He gained over 200 patents, received several honorary doctorates and a number of international awards. The author, a professional writer and maker of TV documentaries, has gained access to hitherto restricted archives in several countries, which provided a wealth of new material and insights, in particular in relation to the war years. She tells here a gripping and illuminating story.

Electrodes for Li-ion Batteries Aug 10 2020 The electrochemical energy storage is a means to conserve electrical energy in chemical form. This form of storage benefits from the fact that these two energies share the same vector, the electron. This advantage allows us to limit the losses related to the conversion of energy from one form to another. The RS2E focuses its

research on rechargeable electrochemical devices (or electrochemical storage) batteries and supercapacitors. The materials used in the electrodes are key components of lithium-ion batteries. Their nature depend battery performance in terms of mass and volume capacity, energy density, power, durability, safety, etc. This book deals with current and future positive and negative electrode materials covering aspects related to research new and better materials for future applications (related to renewable energy storage and transportation in particular), bringing light on the mechanisms of operation, aging and failure.

Otto Hutzinger, the founding editor of The Handbook of Environmental Chemistry, in recognition of his pioneering work and contribution to our understanding of the sources, fate, exposure and effects of persistent organic pollutants. It consists of fourteen chapters written by individuals who have been inspired by his work and have followed in his footsteps by refining our knowledge of this field and opening new research directions. In Professor Hutzinger's tradition of passing on valuable information to others, the authors present recent advances in areas such as inventories, remediation, and analytical determinations. Levels and trends in abiotic environments, biota, and human exposure via food, as well as the risks to the environment and humans from polychlorinated dibenzo dioxins, furans, and PCBs are also discussed. Other chapters deal with the relevant topics of DDT and its metabolites along with halogenated and phosphorus flame retardants.
