The New Value Investing Aug 06 2020 The aim of value investing is to identify stocks that are undervalued and which can be expected to produce an above average return in the future. And the message from the history of investing is clear: if you successfully pursue a value investing strategy over the long term, you will earn an above average return on your portfolio. The goal of The New Value Investing is to help you identify undervalued stocks and teach you how to build your own successful value investing portfolio. Added to this, it is important to understand that value investing is inextricably linked with behavioral finance, and research advances in this area in recent years strengthen the case for value investing. The author explains how stock prices are determined by emotional crowds, how this leads to mispriced stocks and opportunities for the value investor, and how you can harness the insights of behavioral finance to improve your value investing approach. As you work through this book, the author shows how to follow the path from analysis of the economy, to the industry, to company financial statements, to creating a value range for a company's stock. You will learn: -- How to remove emotion from your investment process. -- The essential elements of portfolio construction. -- What a value investor should observe in the wider economy and the market. -- Where to find investment ideas. -- How to read a company's financial statements from a value investing perspective. -- Dividend valuation, earnings valuation and other valuation techniques. -- How to undertake a full valuation analysis, with two complete worked examples of stock valuation for real-life companies. -- What professional value investors at investment funds analyse and how they make their decisions. Value investing is within everyone's reach, so why doesn't everyone use it? The key is patience.

The approach works over the long term if you stick with it and the result could be extra hundreds, thousands or millions in your portfolio at the end of your investment horizon.

The Valuation of Financial Companies Nov 20 2021 This book presents the main valuation approaches that can be used to value financial

institutions. By sketching 1) the different business models of banks (both commercial and investment banks) and insurance companies (life, property and casualty and reinsurance); 2) the structure and peculiarities of financial institutions' reporting and financial statements; and 3) the main features of regulatory capital frameworks for banking and insurance (ie Basel III, Solvency II), the book addresses why such elements make the valuation of financial institutions different from the valuation of non-financial companies. The book then features the valuation models that can be used to determine the value of banks and insurance companies including the Discounted Cash Flow, Dividend Discount Model, and Residual Income Model (with the appropriate estimation techniques for the cost of capital and cash flow in financial industries). The main techniques to perform the relative valuation of financial institutions are then presented: along the traditional multiples (P/E, P/BV, P/TBV, P/NAV), the multiples based on industry-specific value drivers are discussed (for example, P/Pre Provision Profit, P/Deposits, P/Premiums, P/Number of branches). Further valuation tools such as the "Value Maps" or the "Warranted Equity Method" will be explained and discussed. The closing section of the book will briefly focus on the valuation of specific financial companies/vehicles such as closed-end funds, private equity funds, leasing companies, etc.
