A History of the Canadian Dollar Mar 14 2021

Social Security Programs and Retirement around the World Aug 19 2021 This ninth phase of the International Social Security project, which studies the experiences of twelve developed countries, examines the effects of public pension reform on employment at older ages. In the past two decades, men's labor force participation at older ages has increased, reversing a long-term pattern of decline; participation rates for older women have increased dramatically as well. While better health, more education, and changes in labor-supply behavior of married couples may have affected this trend, these factors alone cannot explain the magnitude of the employment increase or its large variation across countries. The studies in this volume

explore how financial incentives to work at older ages have evolved as a result of public pension reforms since 1980 and how these changes have affected retirement behavior. Utilizing a common template to analyze the developments across countries, the findings suggest that social security reforms have strengthened the financial returns to working at older ages and that these enhanced financial incentives have contributed to the rise in late-life employment.

Social Security Programs and Retirement Around the World Nov 09 2020 In recent years, the retirement age for public pensions has increased across many countries, and additional increases are in progress or under discussion in many more. The seventh stage of an ongoing research project studying the relationship between social security programs and labor force participation, Social Security Programs

and Retirement around the World: The Capacity to Work at Older Ages explores people's capacity to work beyond the current retirement age. It brings together an international team of scholars from twelve countries—Belgium, Canada, Denmark, France, Germany, Italy, Japan, the Netherlands, Spain, Sweden, the United Kingdom, and the United States—to analyze this issue. Contributors find that many—but not all—individuals have substantial capacity to work at older ages. However, they also consider how policymakers might divide gains in life expectancy between years of work and retirement, as well as the main impediments to longer work life. They consider factors that influence the demand for older workers, as well as the evolution of health and disability status, which may affect labor supply from the older population.

Canadian Expeditionary Force, 1914-1919
Sep 27 2019 Colonel G.W.L. Nicholson's *Canadian Expeditionary Force, 1914-1919* was first published by the Department of National Defence in 1962 as the official history of the Canadian Army's involvement in the First World War. Immediately after the war ended Colonel A. Fortescue Duguid made a first attempt to write an official history of the war, but the ill-fated project produced only the first of an anticipated eight volumes. Decades later, G.W.L. Nicholson - already the author of an official history of the Second World War - was commissioned to write a new official history of the First. Illustrated with numerous photographs and full-colour maps, Nicholson's text offers an authoritative account of the war effort, while also discussing politics on the home front, including debates around conscription in 1917. With a new critical introduction by Mark Osborne Humphries that

traces the development of Nicholson's text and analyzes its legacy, Canadian Expeditionary Force, 1914-1919 is an essential resource for both professional historians and military history enthusiasts.
