Scientific Integrity and Ethics in the Geosciences

Mar 14 2021 Science is built on trust. The assumption is that scientists will conduct their work with integrity, honesty, and a strict adherence to scientific protocols. Written by geoscientists for geoscientists, *Scientific Integrity and Ethics in the Geosciences* acquaints readers with the fundamental principles of scientific ethics and shows how they apply to everyday work in the classroom, laboratory, and field. Resources are provided throughout to help discuss and implement principles of scientific integrity and ethics. Volume highlights include: Examples of international and national codes and policies Exploration of the role of professional societies in scientific integrity and ethics References to scientific integrity and ethics in publications and research data Discussion of science integrity, ethics, and geoethics in education Extensive coverage of data applications *Scientific Integrity and Ethics in the Geosciences* is a valuable resource for students, faculty, instructors, and

scientists in the geosciences and beyond. It is also useful for geoscientists working in industry, government, and policymaking. Read an interview with the editors to find out more: <https://eos.org/editors-vox/ethics-crucial-for-the-future-of-the-geosciences>

Gravel Roads Nov 09 2020 The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

A Field Manual for the Use of Antimycin a for Restoration of Native Fish Population Jul 06 2020 This report, *A Field Manual for the Use of Antimycin A for Restoration of Native Fish Populations*, provides protocols for the use of antimycin A which have been successfully used in restoration efforts within units of the national park system and in national forest and state projects. This document is based upon experiences of biologists from the National Park Service (NPS), the U.S. Fish and Wildlife Service (USFWS) and New Mexico Department of Game and Fish. The authors' hope that the information included in the manual will be applicable to any application of antimycin for the restoration of native fish populations and that it provides fisheries managers with established protocols for safe, effective, and lawful restoration projects utilizing antimycin A.

Guide to the National Environmental Policy

Act Feb 10 2021 This book is a practical reference and guide to compliance with the National Environmental Policy Act (NEPA). The author presents a comprehensive legal analysis of the statute itself, its implementing regulations, and the hundreds of interpretive judicial decisions, drawing them together in a clear, organized and readable format. The volume also includes an analysis of issues frequently raised in NEPA litigation, a review of every aspect of NEPA law developed during the years since its enactment, and a comparison of key state statutes with NEPA.

[The Revival of the 2-stroke Engine and Studying](#)

[Flex Fuel Engines](#) Aug 26 2019 This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines. Papers address design for a snowmobile using the EPA test procedure and standard for off-road vehicles. Innovative technology solutions include: • Engine Design: improving the two-stroke, gas direct injection (GDI) engine • Applications of new muffler designs and a catalytic converter • Solving flex-fuel design and engine power problems The SAE International Clean Snowmobile Challenge (CSC) program is an engineering design competition. The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise. The competition includes internal combustion engine categories that address both gasoline and diesel, as well as the zero emissions category in

which range and draw bar performance are measured. The goal of the competition is designing a cleaner and quieter snowmobile. The competitors' modified snowmobiles are also expected to be cost-effective and comfortable for the operator to drive.

Camping Grounds Sep 19 2021 An exploration of the hidden history of camping in American life that connects a familiar recreational pastime to camps for functional needs and political purposes. Camping appears to be a simple proposition, a time-honored way of getting away from it all. Pack up the car and hit the road in search of a shady spot in the great outdoors. For a modest fee, reserve the basic infrastructure--a

picnic table, a parking spot, and a place to build a fire. Pitch the tent and unroll the sleeping bags. Sit under the stars with friends or family and roast some marshmallows. This book reveals that, for all its appeal, the simplicity of camping is deceptive, its history and meanings far from obvious. Why do some Americans find pleasure in sleeping outside, particularly when so many others, past and present, have had to do so for reasons other than recreation? Never only a vacation choice, camping has been something people do out of dire necessity and as a tactic of political protest. Yet the dominant interpretation of camping as a modern recreational ideal has obscured the connections to these other roles. A closer look at the history of camping since the Civil War reveals a deeper significance of this American tradition and its links to core beliefs about nature and national belonging. Camping Grounds rediscovers unexpected and interwoven histories of sleeping outside. It uses extensive research to trace surprising links between

veterans, tramps, John Muir, African American freedpeople, Indian communities, and early leisure campers in the nineteenth century; tinned tourists, federal campground designers, Depression-era transients, family campers, backpacking enthusiasts, and political activists in the twentieth century; and the crisis of the unsheltered and the tent-based Occupy Movement in the twenty-first. These entwined stories show how Americans camp to claim a place in the American republic and why the outdoors is critical to how we relate to nature, the nation, and each other.
