Economics of Higher Education Oct 09 2020 This book examines the many ways in which economic concepts, theories and models can be used to examine issues in higher education. The topics explored in the book include how students make college-going decisions, the payoffs to students and society from going to college, markets for higher education services, demand and supply in markets for higher education, why and how state and federal governments intervene in higher education markets, college and university revenues and expenditures, how institutions use net-pricing strategies and non-price product-differentiation strategies to pursue their goals and to compete in higher education markets, as well as issues related to faculty labor markets. The book is written for both economists and non-economists who study higher education issues and provides readers with background information and thorough explanations and illustrations of key economic concepts. In addition to reviewing the contributions economists have made to the study of higher education, it also examines recent research in each of the major topical areas. The book is policy-focused and each chapter analyses how contemporary higher education policies affect the behaviour of students, faculty and/or institutions of higher education. "Toukoushian and Paulsen attempted a daunting task: to write a book on the economics of higher education for non-economists that is also useful to economists. A book that could be used for reference and as a textbook for higher education classes in economics, finance, and policy. They accomplish this tough balancing act with stunning success in a large volume that will serve as the go-to place for anyone interested in the history and current thinking on the economics of higher education." William E. Becker, Jr., Professor Emeritus of Economics, Indiana University

Academic Writing in a Second or Foreign Language Jun 04 2020 It can be a challenge writing in a language that is not your native tongue. Constructing academic essays, dissertations and research articles in this second or foreign language is even more challenging, yet across the globe thousands of academics and students do so, some out of choice, some out of necessity. This book looks at a major issue within the field of English for Academic Purposes (EAP). It focuses on the issues confronting non-native-English-speaking academics, scholars and students, who face increasing pressure to write and publish in English, now widely acknowledged as the academic lingua franca. Questions of identity, access, pedagogy and empowerment naturally arise. This book looks at both student and professional academic writers, using qualitative text analysis, quantitative questionnaire data, corpus investigations and ethnographic approaches to searchingly examine issues central to the EAP field.

The Oxford Handbook of Numerical Cognition Oct 28 2019 How do we understand numbers? Do animals and babies have numerical abilities? Why do some people fail to grasp numbers, and how we can improve numerical understanding? Numbers are vital to so many areas of life: in science, economics, sports, education, and many aspects of everyday life from infancy onwards. Numerical cognition is a vibrant area that brings together scientists from different and diverse research areas (e.g., neuropsychology, cognitive psychology, developmental psychology, comparative psychology, anthropology, education, and neuroscience) using different methodological approaches (e.g., behavioral studies of healthy children and adults and of patients; electrophysiology and brain imaging studies in humans; single-cell neurophysiology in non-human primates, habituation studies in human infants and animals, and computer modeling). While the study of numerical cognition had been relatively neglected for a long time, during the last decade there has been an explosion of studies and new findings. This has resulted in an enormous

advance in our understanding of the neural and cognitive mechanisms of numerical cognition. In addition, there has recently been increasing interest and concern about pupils' mathematical achievement in many countries, resulting in attempts to use research to guide mathematics instruction in schools, and to develop interventions for children with mathematical difficulties. This handbook brings together the different research areas that make up the field of numerical cognition in one comprehensive and authoritative volume. The chapters provide a broad and extensive review that is written in an accessible form for scholars and students, as well as educationalists, clinicians, and policy makers. The book covers the most important aspects of research on numerical cognition from the areas of development psychology, cognitive psychology, neuropsychology and rehabilitation, learning disabilities, human and animal cognition and neuroscience, computational modeling, education and individual differences, and philosophy. Containing more than 60 chapters by leading specialists in their fields, the Oxford Handbook of Numerical Cognition is a state-of-the-art review of the current literature.

Benefit-Risk Appraisal of Medicines Mar 26 2022 Benefit-risk assessment is at the centre of the approval process for every new medicine. The ability to assess the risks of a new medicine accurately and to balance these against the benefits the medicine could bring is critical for every regulatory authority and pharmaceutical company. Despite this there are very few tried and tested evaluative models currently available. The authors of this book have developed a new, pioneering tool for the assessment of benefits and risks for new medicines in development. This model utilises a multi-criteria decision analysis which involves selecting, scoring and weighting key benefit and risk attributes and leads to an overall appraisal of benefits and risks of medicines. Benefit-Risk Appraisal of Medicines establishes the background and criteria required to assess benefit and risk in general and reviews the current practices by regulatory authorities and the pharmaceutical industry, including those models currently available. It outlines the development and evaluation of the authors' new model and analyses the implications of its implementation. Describes an innovative, systematic model which leads to transparent and responsible benefit-risk decision making Contributes important ideas to the debate on benefit-risk appraisal Provides a future framework for benefit-risk appraisal of medicines Benefit-Risk Appraisal of Medicines covers the entire process from the discovery of new medicines to their marketing and is ideal for all those who work in the pharmaceutical industry and regulatory authorities,, as well as post-graduate students of pharmaceutical medicine and clinical pharmacology.

State and Local Government Pension Plans: Current Structure and Funded Status Dec 31 2019 Millions of state and local govꝑt. employees are promised pension benefits when they retire. There is a fed. interest in ensuring that all Americans have a secure retirement. Recently, new accounting standards have called for the reporting of liabilities for future retiree health benefits. It is unclear what actions state and local governments may take once the extent of these liabilities becomes clear, but such anticipated fiscal and economic challenges have raised questions about the unfunded liabilities for state and local retiree benefits. This is a report on: (1) the current structure of state and local govꝑt. pension plans and how pension benefits are protected and managed; and (2) the current funded status of state and local govꝑt. pension plans. Charts.

Review of the Fund's Income Position for FY 2015 and FY 2016 Jan 12 2021 FY 2015 net income is now projected at SDR 1.5 billion. Lending continues to be the main source of income, although advance repurchases have lowered projected lending income in FY 2015 by SDR 0.3 billion. Investment income remains constrained in the low interest environment but the returns were somewhat stronger than projected. A revaluation of pension obligations, required under accounting standard IAS 19 and stemming from a further fall in the discount rate, is projected to entail an adjustment to FY 2015 net income of about SDR 0.8 billion. The paper proposes that GRA net income of SDR 1.3 billion, which excludes the retained earnings of the gold endowment, be placed to the special reserve.* After the placement to reserves, precautionary balances are projected at SDR 14.0 billion at the end of FY 2015. The paper further proposes to retain currencies available for transfer to the Investment Account in the GRA, pending completion later this year of the Board's review of the mandate for the Fixed-Income Subaccount.

The National Environmental Policy Act Jul 30 2022 The goals of the National Environmental Policy Act are to declare a national environmental policy, provide federal agencies with action-forcing provisions intended to ensure that the goals of the policy are implemented, establish the Council on Environmental Quality (CEQ) to provide advice to the President on environmental matters and to monitor the state of the environment, and require the President to submit to Congress an annual report on the state of the environment. This book describes information on the number and type of NEPA analyses; costs and benefits of completing those analyses; and frequency and outcomes of related litigation.

Opportunities for Environmental Applications of Marine Biotechnology May 28 2022 This 2-day workshop is the culmination of a study of the status and future of marine biotechnology. The overall goal of this workshop is to examine what was initially called "Opportunities for Marine Biotechnology in the United States," to consider where we are now in this field of "Environmental Marine Biotechnology," to envision the field in the future, and to discuss any impediments that might be encountered along the way. Opportunities for Environmental Applications of Marine Biotechnology: Proceedings of the October 5-6, 1999, Workshop addresses the question of where the federal government should invest its limited funds and what future

initiatives should be planned.
