Food and Drink - Good Manufacturing Practice Mar 29 2022 Good Manufacturing Practice (GMP) refers to advice and guidance put in place to outline the aspects of production and testing that can impact the quality and safety of a product. In the case of food and drink, GMP is aimed at ensuring that products are safe for the consumer and are consistently manufactured to a quality appropriate to their intended use. Manufacturers have for several years been driving towards such goals as Total Quality Management (TQM), lean manufacturing and sustainability – GMP is bound up with these issues. The ever-increasing interest amongst consumers, retailers and enforcement authorities in the conditions and practices in food manufacture and distribution, increases the need for the food manufacturer to operate within clearly defined policies such as those laid down in GMP. The ability to demonstrate that Good Manufacturing Practice has been fully and effectively implemented could, in the event of a consumer complaint or a legal action, reduce the manufacturer's liability and protect them from prosecution. First launched in 1986, IFST's Good Manufacturing Practice Guide has been widely recognized as an indispensable reference work for food scientists and technologists. It sets out to ensure that food manufacturing processes deliver products that are uniform in quality, free from defects and contamination, and as safe as it is humanly possible to make them. This 6th edition has been completely revised and updated to include all the latest standards and guidance, especially with regard to legislation-driven areas such as HACCP. The Guide is a must have for anyone in a managerial or technical capacity concerned with the manufacture, storage and distribution of food and drink. It is also a valuable reference for food education, training and for those involved in food safety and enforcement. Food scientists in academic and industry environments will value its precision, and policy makers and regulatory organizations will find it an indispensable guide to an important and multifaceted area. About IFST IFST is the leading independent qualifying body for food professionals in Europe and the only professional body in the UK concerned with all aspects of food science and technology. IFST members are drawn from all over the world and from all ages and backgrounds, including industry (manufacturing, retailing and food service), universities and schools, government, research and development, quality assurance and food law enforcement. IFST qualifications are internationally recognised as a sign of proficiency and integrity.

Quality Management Systems for the Food Industry Aug 02 2022 In recent years there has been growing pressure for consistent product quality, and a need for companies to demonstrate sound quality management practices in order to meet 'Due Diligence' requirements of both legislation and the quality assurance practices of customers. It has become accepted that operating to the requirements of the international standard for quality management - BS EN ISO 900- goes a long way towards meeting these needs. The objective of this book is to explain the requirements of the standard, to offer advice about achieving those requirements and to indicate what the assessors will look for at assessment time. It is important that certification to the standard is

sought to support achievement of company objectives and not the reverse, and of course the standard can apply to organizations and services, just as much as to companies. Thus the word 'company' in the text should be treated accordingly. Illustrative material has been presented under the logo of a fictitious company 'Quality Food Services' - in this context QFS does not bear any relationship whatsoever to any identically or similarly named business that may exist. Readers will find it helpful to read the book with a copy of the standard to hand, and are strongly encouraged to read the complete text before taking any steps to prepare for certification to the standard.

This second volume of collected articles includes subjects not covered in the first, and more recent items, to provide a completely up-to-date compilation, covering subjects including analog and digital circuits, test and

measurement, software and algorithms. The articles are cross-referenced and indexed for ease of use. Many of the circuits are from the popular 'design ideas' section where readers submit their own designs. Longer review articles written by the magazine staff are also included.

The Design Quality Manual Oct 04 2022 Everyone involved in a building project wants to achieve a better building but design quality means different things to clients, users, architects, cost consultants and contractors. Negotiating design priorities is an important part of the development process. The Design Quality Manual helps give an objective evaluation of the qualitative aspects of design. Matrices with five defined levels of quality have been developed that cover the key areas of architecture, environmental engineering, user comfort conditions, whole-life costs, detail design and user satisfaction. These can be scored by a visual survey and professional judgement and then augmented by scientific measurement where possible (e.g. temperature, lighting and sound levels). The resultant scores allow comparisons in terms of overall and specific aspects of building performance and design quality. The Manual covers schools, hospitals and housing and offers a set of criteria by which to judge a broad range of design values; it focuses the design team on the needs of the end user and on the overall building performance.
