An insightful blend of art and compassion, patience and endearing honesty, this book comprises Jen's digital art journal, which chronicles this time in their marriage. An Unintended Journey Sep 05 2020 According to the 2009 census, more than five million people living in the United States have Alzheimer's disease or some other form of dementia. Not reported in these statistics are the fifteen million family caregivers who, in total, contribute seventeen billion hours of unpaid care each year. This book addresses the needs and challenges faced by adult children and other family members who are scrambling to make sense of what is happening to themselves and the loved ones in their care. The author, an experienced medical and science writer known for her ability to clearly explain complex and emotionally sensitive topics, is also a former family caregiver herself. Using both personal narrative and well-researched, expert-verified content, she guides readers through the often-confusing and challenging world of dementia care. She carefully escorts caregivers through the basics of dementia as a brain disorder, its accompanying behaviors, the procedures used to diagnose and stage the disease, and the legal aspects of providing care for an adult who is no longer competent. She also covers topics not usually included in other books on dementia: family dynamics, caregiver burnout, elder abuse, incontinence, finances and paying for care, the challenges same-sex families face, and coping with the eventuality of death and estate management. Each chapter begins with a real-life vignette taken from the author's personal experience and concludes with "Frequently Asked Questions" and "Worksheets" sections. The FAQs tackle specific issues and situations that often make caregiving such a challenge. The worksheets are a tool to help readers organize, evaluate, and self-reflect. A glossary of terms, an appendix, and references for further reading give readers a command of the vocabulary clinicians use and access to valuable resources.

This book is a resource for caregivers of people with Alzheimer's or dementia who are also beginning to experience non-memory-related medical conditions. It addresses 54 medical conditions that caregivers often must deal with when providing care. Each medical condition is addressed in an easy-to-follow, two-page guide that provides basic facts about the medical condition, signs that indicate a possible emergency, tips on providing relief in the home, other related issues to watch out for, and safety tips for the caregiver. Written by experts at the University of North Carolina at Chapel Hill and Duke University, this book is based on the latest clinical knowledge and scientific research on Alzheimer's and the care of Alzheimer's and dementia patients.
